4. Local Data-Based EMG Findings

Signal Reasoning (Quantitative Text Analysis):

- * Session Score: 23/100. Signal Quality: Good.
- * Side Deficit: 100.0%. Symmetry Score: 0.0%. Marked right-side deficit detected.
- * Lowest Activity: Channel 3. Highest Peak: Channel 2.
- * Fatigue Drop: High (75.4% decline from early to recent activity).
- * Channel Balance: left-side channel balance 25%; right-side channel balance 0%.
- * Suggested focus: compare the two right-side muscles/channels and train the weaker activation pattern.
- * Selected affected side: Left Affected. Non-diagnostic rehab monitoring support only.

Recorded Session Findings:

- * Recording summary: 5320 EMG samples captured over approximately 60 seconds.
- * Session Score: 19/100. Signal Quality: Good.
- * Side Deficit: 100.0%. Symmetry Score: 0.0%. Impression: marked right-side activation deficit. Bilateral EMG symmetry is reduced and requires targeted rehab attention.
- * Lowest Activity: Channel 3 showed the lowest average activation (0.0).
- * Highest Peak: Channel 2 showed the highest peak activation (786.5).
- * Channel Balance: left-side channel balance 24.9%; right-side channel balance 0.0%.
- * Fatigue Drop: High fatigue pattern with 93.1% decline from early to recent activity.
- * Sustained activation: Channel 1 58.5%, Channel 2 6.8%, Channel 3 0.0%, Channel 4 0.0% above threshold.
- * Clinical note: The selected affected side is left; compare this report with clinical examination and patient symptoms. This is a non-diagnostic rehab monitoring prototype that provides quantitative EMG feedback for physiotherapy support.
